

FESTIVAL MAP DESIGN

- **IDENTITY:** The map should represent the event in every way, colours used, images used, layout and theme and event logo.
- NAVIGATION: The job of the map is to help the festival goer navigate their way around, so it should be easy to follow and read, with clear identification of features (Key/labels).
- 3) GEOGRAPHIC CONTEXT: The event is in a real place, so this place should be reflected in the map. (Roads/entrances/physical features such as water/beaches/trees etc.)
 - **INFORMATION:** As well as a key or labels to identify features of the map, often information about the event is on display, such as date, time, location etc.
 - **LAYOUT:** The map as a whole page should look like it fits together as one piece of work. Make sure that every part of the map fits with the theme.
 - **ICONS:** Choose or design your icons carefully to match each other and the theme of the event.
